**GREEN METRICS EVALUATION COMMITTEE
UNIVERSITY OF INDONESIA
PRESENT**

First of all, I send you greetings and I write to you to present our University Energy Program.

The program is dedicated to managing the work of the Autonomous University of San Luis Potosí through strategies that guarantee the responsible use of energy with sustainable development approaches that considers sustainable urban mobility, the use of renewable energies, and energy efficiency applications. We have a general guideline for the energy efficiency applications that apply to all campuses to promote responsible consumption and make an orderly transition to the use of green technologies.

This program also includes an approach on sustainable urban mobility where we have the institutional programs UniBici, CarShare and the newly created Habitable and Sustainable Spaces Program.

In the case of UniBici, it dates since 2012 and uses the bicycle as an insignia for all ways of mobility. It includes recreation and academic activities, events, infrastructure design and urban management.

As for the CarShare program, it is a private car sharing initiative for daily common destinations, while the Habitable and Sustainable Spaces considers bioclimatic campus design and sustainable construction.

Without further ado, I thank your kind attention,

Best regards,

Dr. Marcos Algara-Siller

Director of the Environmental Agenda
Autonomous University of San Luis Potosí Mexico
