#### Additional evidence

##### [5] Transport (TR) [5.16] Pedestrian path on campus

Through the sustainable urban mobility pyramid of means of transport in the university we value above all the most vulnerable, healthy and enjoyable mean: walking and walking safely.

Examples of tactic urbanism

We have biannual events that promote, analyze or assure walking to our campuses. Some events in 2019 like “BacheChallenge” involved evaluating the walking infrastructure with a mobile application; others like “Cebratón” intend to do artistic pedestrian paths to reclaim safe walking spaces. The use of tactic urbanism is used in different sceneries to educate and observe how users react and that way we can plan and design appropriately.
