

AGENDA  
AMBIENTAL

October 6<sup>th</sup>, 2021

**GREEN METRICS EVALUATION COMMITTEE  
UNIVERSITY OF INDONESIA  
PRESENT**

First of all, I send you greetings and I write to you to present our University Water Program.

This program is responsible for the appropriate management of water in all the activities of the Autonomous University of San Luis Potosí through technical aspects of efficiency and treatment, research and innovation, and communication and media campaigns for the community.

We address this program by several views, from the reduction of water consumption with water refill dispensers in our campus facilities, promoting an autonomous water management in the university community through water treatment plants that remediate water disposal in bathrooms, labs and cafeterias in agreement with the applicable legislation and certifications, also the rain water uptake systems help solve water shortage in some campuses.

Our environmental and communication strategies have been key to improve awareness in the community of students, professors and workers who adopt and follow up these technical modifications.

Without further ado, I thank your kind attention,

Best regards,

**Dr. Marcos Algara-Siller**

Director of the Environmental Agenda

Autonomous University of San Luis Potosí, Mexico.
