[3] Waste (WS)

[3.1] Recycling Program for University Waste

The UASLP generated an action plan for the management and handling of Urban Solid Waste, considering recovery and recycling at an institutional level.

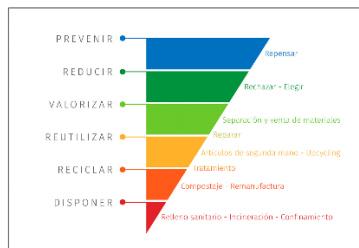

Selective disposal of urban solid waste

CONSUMO RESPONSABLE

Proserem seeks to reduce waste through responsible consumption, which is based on the inverted responsible consumption pyramid and the sustainable development objectives that Proserem seeks to meet.

Communication canvas infographs distributed in outdoor stations

Description:

The Proserem (Material Separation and Recycling Program for its acronym in Spanish) looks for the reduction of urban solid waste generated in the UASLP through a selective disposal, classifying waste into compostable organics, recyclable inorganics and non-recyclable inorganics.

Aided by the infrastructure, this program categorizes waste. For example, compostable organic waste is taken to any of the Unihuertos (gardening programs) to be used in the manufacture of compost, while the inorganic waste is collected and canalized to responsible associations that guarantee recycling.
